

HLT15 1500KG CAPACITY HIGH LIFT PALLET TRUCK

1500kg Capacity

HLT15 is a high lift pallet truck with a larger than standard capacity of 1500kg.

Designed for use for an open bottom pallet or stillage, scissor action high lift pallet trucks can help reduce repetitive strain injuries, by raising the load to a more acceptable height. Often these injuries occur whilst constantly bending down to unload pallets or in piece work environments.

HLT15 is a single cylinder design of pump. We advise checking first - but dimensions across the forks are 520x1100mm, so it is ideally suited to the most common type of Euro Pallets (80x120cm with open design).
