

Hand Pallet Truck with Foot Brake

With across fork dimensions of 540x1150mm, this braked pallet truck is an ideal size for the most common UK, Chep and Euro Pallets.

It is fitted all around with quiet running PU rollers, with tandem fork rollers helping to dissipate the load.

These braked pallet trucks also have nylon guide wheels on each of the forks, which help with smooth entry and exit of the pallet.

The foot brake is a quick and easy way for the pallet truck to be secured during transport, or to assist when being used on a slight incline.

Fitted with a high quality 2500kg pump and three stage hand control lever.

HSE guidelines state that a runaway pallet truck should be stopped by lowering the forks.
