Designed for sign makers and other businesses that handle media rolls, a Media Roll Lifter allows users to manoeuvre heavy media rolls onto the lifter and then directly onto the printer feeder.

They have 360° multi-directional wheels, with brakes on the rear. The units also come with nylon safety straps to help secure the load and they have an easy to use foot pump.

Concave trough design and a wide handle helps to stabilise the load and manoeuvre the load into in to tight spots.
