TFD15 Double Scissor Lift Table

TFD15 is a double scissor lift table with a 150kg capacity.

With a smaller external profile, it is better suited for those applications where a higher lift height is required, but access is more restricted such for example rack servers in a data center.

It has two swivel wheels with brakes, non marking 100mm Poly-utherane tyres all around help to prevent damage to floors, an overload valve in built in to the hydraulics.
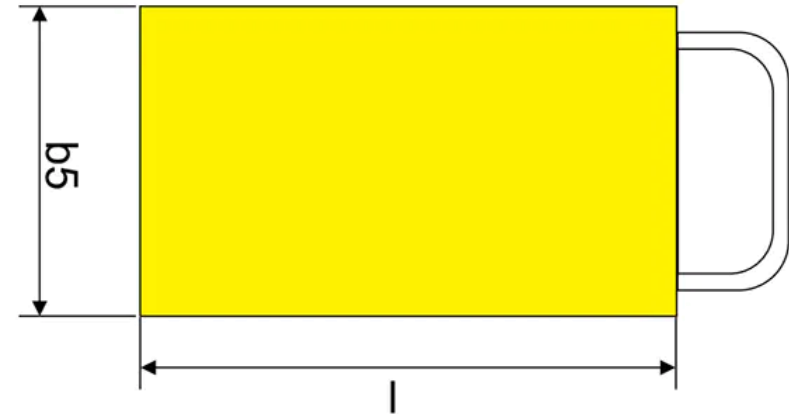

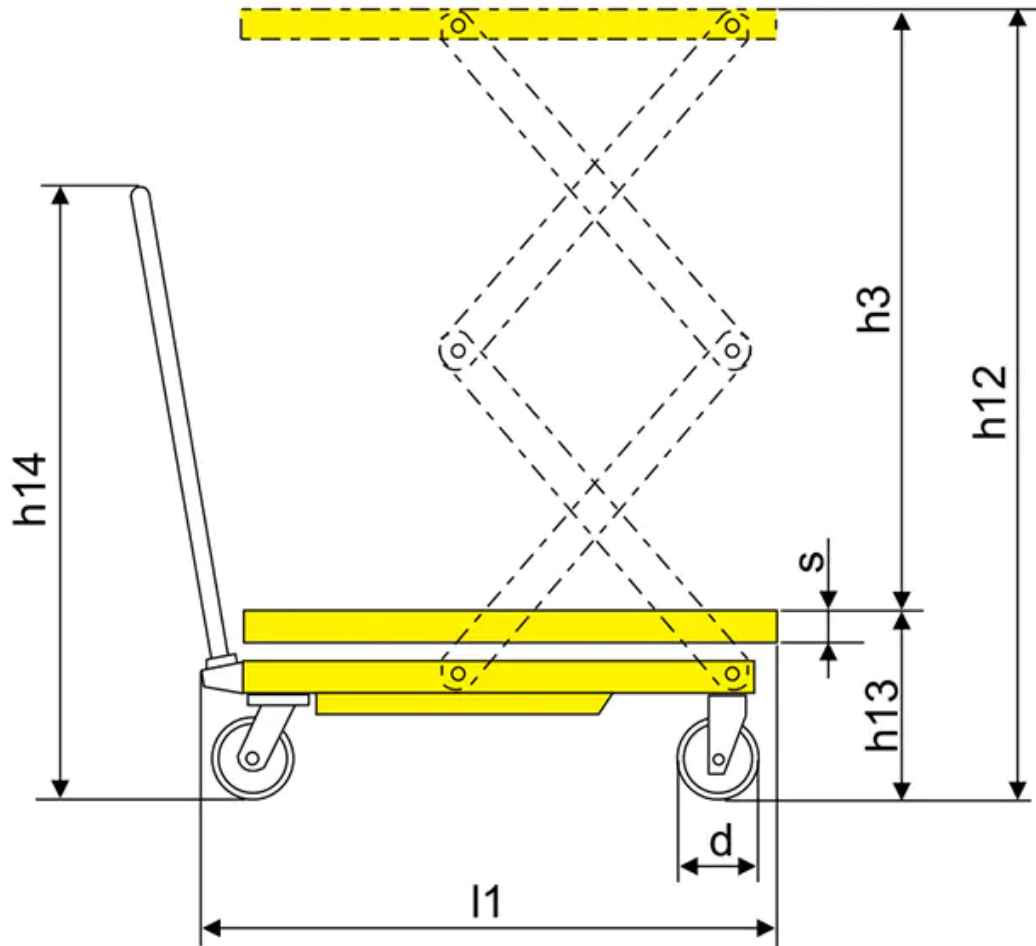

Having a lower capacity than it's bigger brothers, means the manually operated foot pedal takes up to just 30 cycles to hit full height of 1100mm. To lower the unit, you only have to press the speed controllable hand lever.

At just 64kg, it is easily manoeuvrable and easy to use.

For full dimensions, please see page 2
